

iService Tablet Setup

Onboarding Checklist:

Before you launching iService on a tablet, we recommend 3 easy steps:

1. Ensure a supported browser's installed

iService supports Chrome & Safari.

2. Bookmark your iService URL

It's the same URL you use on desktop. Consider making it the browser's homepage!

3. Grant iService permission to record

Once you're logged into iService, [follow these steps](#) to make sure it can access both camera & microphone for recording.

Supported hardware/software:

- Most widely-available Android & Apple tablets are supported, but...

Only Androids support pausing while recording videos. If you're providing tablets to your Technicians, we strongly recommend Android.

- Chrome & Safari

Tablets run iService through a web browser, not an App.
