

Oplogic Release Notes

5/5/26

General Bug Fixes

As usual, we've included the latest bug fixes for improved reliability and performance.

What's New in This Release

This release focuses on form visibility controls, lead management improvements, and security enhancements.

This release includes the following updates:

1. **Form Permissions**

Custom Forms setup now has an option for visibility. Forms can be displayed in Customer Profile, the Desking tool, or both – allowing stores to control who can see and use certain forms in the system.

2. **Round Robin Lead Assignment Across Stores**

Fixed a bug that prevented round-robin lead assignment when transferring a lead to another store in your group.

3. **Co-Buyer Retained When Transferring a Lead to Another Store**

Co-buyer information is now preserved when pushing a customer lead to a different store.

4. **Sign to Drive Credit App Security Improvements**

We've updated how credit authorization forms handle customer data to follow security best practices. No action is required on your end.

Questions about these updates? Contact [Support](#) or reach out to your account representative.
