

Oplogic Release Notes

5/19/26

General Bug Fixes

As usual, we've included the latest bug fixes for improved reliability and performance.

What's New in This Release

This release delivers new filtering capabilities on the 700 Credit Report, corrects GM internet lead posting issues, and improves the LightYear deal push flow for deals with incomplete cobuyer information.

This release includes the following updates:

- 1. Salesperson and Bank Filters on the 700 Credit Report**
The 700 Credit Report now includes Salesperson and Bank dropdown filters, letting users segment credit report data by who originated the deal and which lender was used. Both filters default to "All," apply via the existing Refresh button, and will remain when pages are refreshed.
- 2. GM Internet Leads Now Posting Correctly**
Certain GM internet leads were failing to post into Oplogic due to a mismatch in how payment amount data was formatted. GM leads are now coming through correctly for all stores.
- 3. LightYear Deal Push with Missing Cobuyer Information**
Deals with a cobuyer missing a date of birth or address would sometimes fail to push in LightYear DMS stores, requiring users to navigate away from the deal push page to fix the cobuyer profile manually. Cobuyer information entered inline on the deal push page now saves back to the cobuyer profile, and missing date of birth values no longer block the push – allowing the entire deal push to complete without leaving the flow.
